Enterprise Readiness & SLA

Operational Readiness and Service Commitments – EAIKA

Document Title	Enterprise Readiness & Service Level Agreement (SLA)
Project Name	Enterprise AI Knowledge Assistant (EAIKA)
Author	PMO / Engineering
Version	1
Status	Approved
Date	4-Jul-26

1. Purpose

This document defines the operational readiness criteria required before EAIKA can go live in production, and the service level commitments the platform will be held to once operational. It is intended for the platform owner, support teams, and business stakeholders who depend on the assistant.

2. Enterprise Readiness Checklist

Category	Readiness Criterion	Status
Functional	Core RAG pipeline (ingestion → embedding → retrieval → generation) validated end-to-end against the pilot document set.	Required for go-live
Functional	Source citation displayed correctly for all tested query types.	Required for go-live
Security	Information Security review of local-deployment data handling model completed and approved.	Required for go-live
Security	Administrator functions (upload, rebuild) restricted to authorized users.	Required for go-live
Infrastructure	Production environment provisioned per the Infrastructure & Capacity Plan.	Required for go-live
Infrastructure	Backup and recovery procedure validated for ChromaDB store and document repository.	Required for go-live
Quality	UAT completed and formally signed off by pilot department representatives.	Required for go-live
Support	Support/runbook procedures documented for common issues (failed ingestion, model timeout, degraded retrieval quality).	Required for go-live
Change Management	Pilot users trained and communication of go-live sent per the Communication Plan.	Required for go-live

3. Service Level Objectives

Service Dimension	Target	Notes
Query response time	Answer returned within an agreed response window appropriate to the hosting hardware profile defined in the Infrastructure & Capacity Plan.	Measured from question submission to full answer + citations rendered.
Platform availability (pilot)	Available during core business hours for the pilot department, with planned maintenance windows communicated in advance.	Not designed as a 24/7 mission-critical service in Phase 1.
Knowledge base freshness	New documents available for query within an agreed turnaround after upload and build trigger.	Depends on document volume and build scheduling.
Answer accuracy (source-grounded)	Consistent with the accuracy target validated during UAT.	Monitored via periodic sampling and user feedback post-launch.
Support response time	Issues logged through the standard IT support channel are acknowledged within the organization's standard internal SLA tier for this service classification.	Escalation path defined in the Stakeholder Register & Communication Plan.

4. Support Model

- Tier 1: General user issues (login/access, basic usage questions) handled by the organization's standard IT helpdesk.
- Tier 2: Application-level issues (ingestion failures, incorrect answers, UI defects) handled by the EAIKA engineering support rotation.
- Tier 3: Platform-level issues (Ollama/model service failure, ChromaDB corruption, infrastructure outage) handled jointly by Engineering and Infrastructure/DevOps.

5. Maintenance Windows

Planned maintenance (e.g., model updates, knowledge base full rebuilds, infrastructure patching) will be scheduled outside core business hours where possible and communicated to pilot users in advance in accordance with the Communication Plan.

6. Exclusions

- SLA targets assume the pilot-scale document volume and user concurrency defined in the Infrastructure & Capacity Plan; expansion to additional departments requires SLA reassessment.
- Accuracy of answers is dependent on the quality and completeness of the underlying source documents; the platform cannot compensate for outdated or missing source content.
- The SLA does not cover issues arising from unsupported document formats or corrupted source files submitted for ingestion.

7. Review Cadence

Enterprise readiness criteria are reviewed at the Launch Readiness Review prior to go-live. SLA performance is reviewed monthly during the stabilization period and quarterly thereafter, with results reported to the Executive Sponsor.

8. Approval

This Enterprise Readiness & SLA document requires sign-off from the Engineering Lead, Infrastructure/DevOps Lead, and Business Sponsor prior to go-live.
